Summary

I am a fifth year PhD candidate in CSE at the University of Michigan, advised by [Professor Mosharaf Chowdhury](#). I build **efficient software systems for deep learning**, with a recent focus on the efficient management of not only time, but also **energy**. My research views energy as a first-class systems resource that is worth carefully optimizing and allocating based on precise measurement and understanding.

I am passionate about **open-source** software and making real-world impact with my research. My open-source works, including the [Zeus](#) library, have received wide recognition from academia and industry from for instance [Google](#), [PyTorch Foundation](#), and [GitHub](#). I created and lead the [ML.ENERGY initiative](#) as part of my research and open-source efforts, which is now a cross-institutional effort.

I am in I-485/I-765 pending state; if all goes well, I expect to obtain US work authorization some time in 2026.
